Improve Your Eyesight by Strengthening Eye Muscles

Holographic Technology

safe * drug free * fast eyesight relief

MASS SIGNAL TECHNOLOGY

8ight Holographic Technology has developed a way to signal your body by use of acupuncture to boost your body's eye muscles to improve eyesight in a safe natural way without the use of drugs and chemicals.

The masstm disc uses thermal temperature differences on each side of the holograms creating an energy vortex to activate the body's acupuncture system. This effect raises the body's natural ability to strengthen muscles that influence the curvature of the eyes promoting better eyesight as described in acupuncture medicine, TCM. The temperature effect in physics is referred to as a thermal sink.

The masstm hologram further captures molecular signatures of natural ingredients in a scalar wave format using frequencies of light and sound that are known to promote muscle mass and strength. Some examples are calcium, magnesium, potassium, testosterone and other elements, vitamins and minerals.

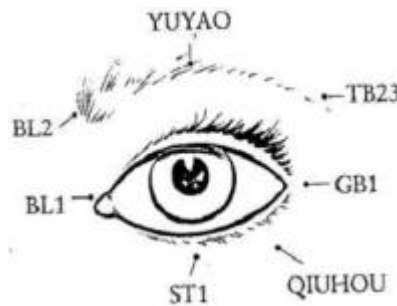

Testosterone levels have been shown in blood test to increase when using the masstm holographic disc while reportedly increasing sexual feelings, which is a plus for those experiencing a testosterone decline with ageing.

Scalar wave energy resonates with the human body and provides the necessary healing frequencies it needs. Research indicates the body communicates with scalar waves so using scalar waves compatible with the bodies communication system to signal necessary minerals and other elements becomes the key to good health in a toxic environment.

The **mass™** holograms also contains colors, numbers and geometric patterns that boost the energetic effect on the acupuncture points in achieving an acupuncture solution for eyesight improvement.

The holographic colors create a pleasant and different experience as light comes through the **holograms** reflecting colors around the eyes especially when used with sun glasses.
